

Non-binding Letter of Support

To: AXIOM project team

From: [Operator / AOC / Airline stakeholder]

Date: [date]

We confirm that the operational problem AXIOM addresses is material: fragmented operational truth, manual evidence collection, side spreadsheets, and hard-to-reconstruct safety-critical decisions create cost, audit friction, and resilience risk.

Based on AXIOM's Phase-0 evidence pack — including validator coverage, adversarial CI, audit/replay chain, chaos drill, and Annex 19 SMS regulator-pack generation — we support further funded development of the Phase-1 runtime for dispatch, crew, tech/CAMO, SMS/AVSEC, and ATC/ANSP integration.

This letter is non-binding. It does not commit us to procurement or production deployment. It confirms that the problem is real, the direction is worth review, and we are open to structured design-partner discussions.

REQUESTED NEXT INTERACTION

- 90-minute evidence walkthrough
- Phase-1 workflow review
- regulator/audit evidence review, if appropriate
